**Description of work:**

- 1) **Data Collection:** This package includes sample preparation, unit cell determination and data collection.
- 2) **Unit Cell Check:** This package includes sample preparation and unit cell determination. Database search is also included in this package.
- 3) **Complete structure:** This package includes sample preparation, data collection, space group determination, data reduction, absorption correction, structure determination and refinement. Database searches, and preparation of publication materials and **one hour of work** are also included in this package.  
**\*Additional Work:** Additional work charges may apply for complex structures (client will be contacted if additional work is required) at \$175.00 per hour.

Researchers are asked to report any publications based on work performed, in whole or in part, at the Canadian Light Source or CLS@APS Program. The list of the publications reported to the CLS is an important factor in our funding and is taken into account during peer review of research proposals. For information on acknowledging the CLS and publication submission, [click here](#).

**By means of my signature:**

I confirm that the research team involved in this project, throughout the lifecycle of the research project, up to and including the dissemination of research results (e.g., publication) will not include individual affiliated with any organization on the STRAC Policy's List of Named Organizations (NRO).

I confirm that activities related to this proposal, throughout the lifecycle of the research project, up to and including the dissemination of research results (e.g., publication), will not be supported by funding or in-kind support from any organization on the STRAC Policy's List of Named Organizations (NRO).
